## DETAILED ACTION

### *Examiner's Amendment*

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Scott P. Ryan (Reg. No. 59,535) on 5/29/2007.

This application has been amended as follows:

#### IN THE CLAIMS

Replace claim **1, 9 and 17** as follows.

#### **Claim 1:**

A method to time-shift data in a communication device, the method comprising:  
buffering the data and timing information using a memory arrangement;  
receiving one of the buffered timing information and current timing information associated with currently transmitted data in a decryption subsystem; and  
using the decryption subsystem to decrypt the buffered data only when the buffered timing information is not earlier than a latest timing information associated with

Art Unit: 2131

currently known data received by the decryption subsystem, wherein the buffered data becomes unavailable once the decryption subsystem receives the current timing information.

**Claim 9:**

A controller configured to operate with a processor-readable medium having processor-executable instructions for:

buffering data and timing information received by a communication device using a memory arrangement;

receiving one of the buffered timing information and current timing information associated with currently transmitted data in a decryption subsystem; and

using the decryption subsystem to decrypt the buffered data only when the buffered timing information is not earlier than a latest timing information associated with currently known data received by the decryption subsystem, wherein the buffered data becomes unavailable once the decryption subsystem receives the current timing information.

**Claim 17:**

A communication device operable in a satellite-based digital audio radio (SDAR) system, the communication device comprising:

an antenna configured to receive a signal from an SDAR service provider;

Art Unit: 2131

a channel decoder operatively coupled to the antenna and configured to generate data and timing information as a function of the received signal;

a memory arrangement operatively coupled to the channel decoder and configured to buffer the data and timing information;

a decryption subsystem operatively coupled to the memory arrangement and the channel decoder and configured to

receive one of the buffered timing information and current timing information associated with currently transmitted data in a decryption subsystem, and

decrypt the buffered data only when the buffered timing information is not earlier than a latest timing information associated with currently known data received by the decryption subsystem, wherein the buffered data becomes unavailable once the decryption subsystem receives the current timing information.

### ***Allowable Subject Matter***

1. Claims 1 – 24 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The above mentioned claims are allowable over prior arts because the CPA (Cited Prior Art) of record fails to teach or render obvious the claimed limitations in combination with the specific added limitations, as recited in independent claims 1, 9 and 17 (& associated dependent claims).

The prior arts fail to teach or suggest a method time-shift data in a communication device, the method proposes buffering the data and timing information using a memory arrangement; receiving one of the buffered timing information and current timing information associated with currently transmitted data in a decryption subsystem; and using the decryption subsystem to decrypt the buffered data only when the buffered timing information is not earlier than a latest timing information associated with currently known data received by the decryption subsystem, wherein the buffered data becomes unavailable once the decryption subsystem receives the current timing information.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Longbit Chai whose telephone number is 571-272-3788. The examiner can normally be reached on Monday-Friday 8:00am-4:00pm.

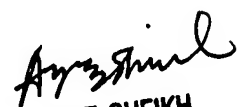

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ayaz R Sheikh can be reached on 571-272-3795. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
